## Summary

Full stack software engineer with extensive experience in the design and development of data driven, responsive, web based application systems.

### Programming Languages

PHP, Javascript, HTML5, SQL, CSS3, Python, C#, Perl, C

### Libraries & Frameworks

Laravel, Vue.js, Symfony, Bootstrap, jQuery, Lodash, React, Gatsby, OpenFaaS, Express.js

### Tools & Platforms

Linux, MySql/MariaDb, MS SQL Server, Apache, Nginx, Node.js, Vagrant, Homestead, Redis, Elasticsearch, Laravel Forge, AWS Cloud Services and APIs, Docker, Kubernetes, Git, Github, Bitbucket, VSCode, Postman

## Professional Experience

2009-08 - present

### Full Stack Remote Software Engineer

*INDEPENDENT CONTRACTOR FOR VARIOUS CLIENTS*

#### Hotbox ERP

- Collaborated with a remote team of developers to design and develop core features of the company's ERP solution for the cannabis industry using Vue.js and Laravel frameworks
- In addition to core features developed real-time updates and push notifications using web sockets, and driverless receipt and label printing solutions for the ERP and POS systems
- Developed the front end and backend api for the online public facing pre-ordering system as a Progressive Web App using the Vue.js framework, Elasticsearch, Redis, and Node.js

#### Every Day Counts Nutrition, LLC

- Designed and developed EverydayCountsNutrition.com, a website for subscription based nutritional supplement sales
- The website utilizes a custom e-commerce and CMS system I developed using PHP 7, Symfony, Javascript, jQuery, and MySQL

#### Rida.io

- Designed and developed a recurring subscription billing system for rida.io using PHP 7, Symfony, Javascript and MySQL
- Developed an API for the billing system for use by merchant webhooks
- Created a new BI solution with features such as drill-down reports, scheduled delivery, customizable dashboards, drag and drop dashboard layouts, and a Raspberry Pi kiosk display for sales offices

#### Retargeting Cloud

- Designed and developed app.retargetingcloud.com as the front end for a retargeting advertising API using Javascript, PHP, HTML, CSS, MySQL, and AWS
- Designed and developed the sites subscription and escrow deposit accounting system that processed over \$1.9 million in micro transactions annually

#### Banner Cloud

- Designed and developed bannercloud.com, a browser based banner ad generator and wysiwyg editor that offers the user the ability to create image ad sets from templates and edit several image ad sizes at once
- Developed advanced image editing features normally found only in desktop editors (magic eraser, filter effects, flood fill, etc.) and an auto crop feature for cropping an image for multiple ad sizes based on a desired focal point
- The application relies on html5 features such as Canvas, Web Workers, and WebRTC using PHP, Javascript, jQuery, RequireJS, BackboneJS, TogetherJS, MySQL, and AWS

#### Rockstar Power Suite

- Collaborated with a remote team of developers to create Rockstar Power Suite, a desktop commercial software product for the online advertising agency market
- Developed a vector object library using C#, GDI+, and Microsoft's XNA Game Studio SDK to produce unique graphics editing features
- Invented a unique compression method for animated gif encoding using C# and GDI+ resulting in the smallest possible file size with the highest quality
